

Mark Harrison

Mark Harrison is a Senior Research Fellow and foundation member of the QUT Centre for Tropical Crops and Biocommodities. He is a biochemist with extensive basic and applied research experience in plant science. His current research interests include development of new technologies to add value to agricultural residues, biomass pretreatment chemistry, medical microbiology, and animal nutrition. He currently leads research and consulting projects into the conversion of low value agricultural wastes and by-products into animal feed, fine chemical, fibre, and energy products.
