

Dr Denis Lourdin is Research Director at the French National Institute for Agricultural Research (INRA) in the « Biopolymer, Interactions and Assemblies » Unit of INRA Nantes center. He has been working in 25 years on starch and flour based materials for food and non food uses. He developed original research on plasticization, antiplasticization, glass transition, molecular mobility, physical ageing, morphology, thermomechanical properties of starch materials. He was the first to demonstrate their shape memory properties, opening new perspectives of applications for extruded starch. More recently, he worked on resorbable and biocompatible starch devices for biomedical implants. He has around 80 original papers, book chapters and patents within the above mentioned topics.
